Tilt-turn fitting for wood and PVC profiles made of SS304

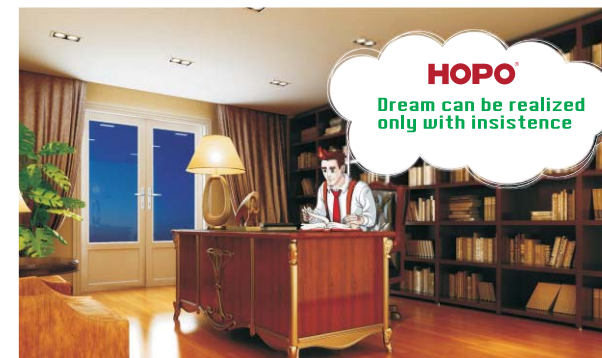

Wood and PVC tilt-turn windows have been used more and more widely for their high thermal insulation quality. However, ugly rust will ruin tempers and moods of all users. Stainless steel SS304 is the perfect solution for anti-rust requirement. The SS304 solution has the idea of environment protection with no chemical surface treatment. The high recycle rate will save energy to great extent.

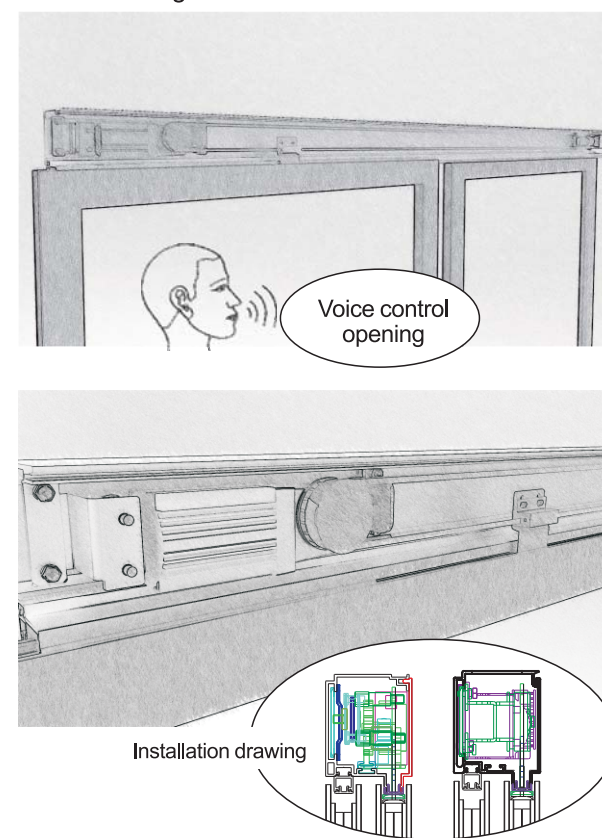

ATT90---Patent tilt-turn fitting for Alu-wood profile. 16mm U groove combined with 14-18mm C groove.

Alu-wood profile is more and more popular now, because of its strength of alu. profile and decorative effect of wood cover. It is not proper to use simply the normal PVC & Wood window fittings, as it will cause severe danger to the hinge fixed, as well as damage to the wood surface. HOPO ATT90 combine fittings of 16mm U groove and 14-18mm C groove, directly fixed to the Alu. profile with no screws.

Electric sliding door for indoor use.

Automatic sliding doors are already widely used in public buildings or public areas of residential buildings. But there is still no solution for use in private home. HOPO indoor automatic sliding door is an solution for home use that can be controlled with sound and info-red signals.
